

Sophisticated simplicity

# Swedish know-how

Based on the idea of making your production faster, easier and more efficient.

# Our company

...started in 1978 and is based on one idea. The idea of making your production, for plastic bags on-roll, flow faster, easier and more efficient. In essence, we want to make a difference – and we are proud to say that our solutions are making a difference. Today, we are one of the leading manufacturers of machinery for bags on-roll.

## Reduce your costs

With our machines you can choose between in-line and off-line solutions and create your own layout. They are easy to operate and handle with a minimum of staff. In other words - with FAS machines you can speed up your cash flow, produce with a minimum of waste and lower your maintenance costs.

## Flexible flow

We offer you machines that let your production flow quickly, efficiently and simply. Our machine moduls can be used together but also as single units. We invest about 8-10% of our annual turnover on research and development. In that way we can always offer you more efficient supplies and new technology.

*“We want to make a difference  
– our motto is that everything is possible.”*

## All-time service

We are well known for customizing machines to our customers needs. Our motto is that everything is possible, but miracles takes longer. We will help you with any service or technical questions that you might have. We can offer you training for staff on site and we are always available when advice and help is

needed. We also let the components of the machines be manufactured by reliable sub-suppliers. For you, it means that no matter how old your machine is, we solve your problem, if you ever get one.

# A productive choice

FAS Converting Machinery AB together with Peco Inc are leading manufacturers of machinery for bags on-roll production. With our modular concept it is easy to find and create your own layout for different products. As a result, you get machines that reduce costs and speed up your cash flow, produce with a minimum of waste, lower your maintenance costs and are easy to operate and handle with a minimum of staff.
